

Project Executable Files

Date	28 September 2026
Team ID	SWTID-2026-3976
Project Name	AI FAQ Assistant API
Maximum Marks	2 Marks

Project Executable Files - Submission Checklist

Item	Status	Location / Notes
Source code (backend)	✓ Included	GitHub repository - https://github.com/sabarivasan-2105/AI_FAQ_Assistant_API-
package.json / dependencies	✓ Included	Express, Mongoose, bcrypt, jsonwebtoken, cors, dotenv, @google/genai, nodemon (dev)
Environment configuration	✓ Included (as .env.example)	PORT , MONGO_URI , JWT_SECRET , GEMINI_API_KEY - actual .env excluded via .gitignore
API test collection	✓ Included	AI_FAQ_Assistant_API.postman_collection.json , covering auth, FAQ and AI-generation endpoints
Final demonstration / API testing video	✓ Included	Demo & API testing recording (Google Drive)

Actual Project Folder Tree

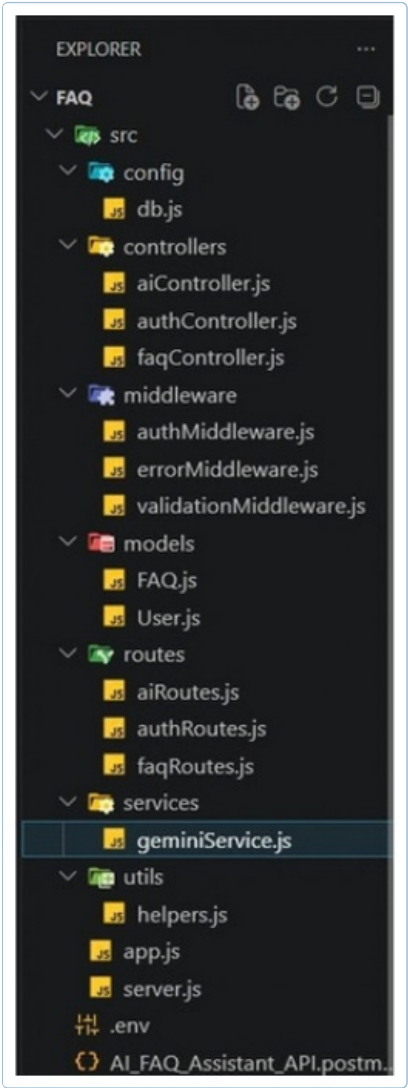

Fig. 1 - Real folder tree (VS Code Explorer)

Deployment & Access Details

Setting	Value
Database	MongoDB, connected via src/config/db.js and MONGO_URI
Server Port	5000 by default (process.env.PORT 5000); the team's captured test session ran the server on port 5001
Run command	npm install then npm run dev
Base URL (local, as tested)	http://localhost:5001/api
Demo Test Account	Name: sabari · Email: sabari21@gmail.com

Known Issues

- The two AI-generation endpoints (`/api/ai/answer` , `/api/ai/generate-faq`) depend on live Google Gemini API latency, which is expected external-service behavior rather than a defect (see Performance Testing).
- The `FAQ` schema's `category` field only accepts a fixed enum (Technology, Education, Health, Banking, General); a category outside this list is rejected by Mongoose validation rather than silently accepted.
- There is no role field on the User model or admin-only route in this cycle, so the richer Admin/Editor/Author/Reader role split shown in the team's original User Flow diagram is not yet enforced in code (see Roles and Responsibilities and Scalability & Future Plan).
