Empathy Map

Persona: **Priya** – Customer Support Operations Manager / Primary User of the AI FAQ Assistant.

SAYS "I get the same five questions every day and I'm still typing the same answer by hand." "I can never remember which keyword actually finds the right FAQ." "I don't want just anyone editing an FAQ someone else wrote."	THINKS "There has to be a faster way to turn a topic into a finished FAQ." "I need search that understands what customers are actually asking, not just exact words." "Every entry needs a clear owner and a category, not a pile of loose notes."
PERSONA — Priya · Support Operations Manager / Registered User	
DOES - Manually rewrites near-identical answers for repetitive customer questions. - Searches through old tickets and documents to find how a similar question was answered before. - Coordinates with teammates over who is allowed to change which FAQ.	FEELS - Overloaded by the volume of repetitive inquiries. - Frustrated when a search turns up nothing useful. - Confident and in control when every FAQ has a clear category, owner and AI-assisted draft.

This empathy map directly informed the AI FAQ Assistant feature set: JWT-authenticated, ownership-checked CRUD on FAQs (addresses SAYS/DOES) and Gemini-generated answers and FAQ pairs plus category-based organization and search (addresses THINKS/FEELS).
